FINALIZATION OF DRAFT NEW REPORT ITU-R M.[IMT TERRESTRIAL BROADBAND REMOTE COVERAGE]

1. Background

ITU-R WP5D is working towards a new report on “Terrestrial IMT for remote sparsely populated areas providing high data rate coverage”. The working document on “Terrestrial IMT for remote sparsely populated areas providing high data rate coverage” was developed in the WP 5D 34th meeting in February 2020 and further progress on working document PDNR ITU-R M.[IMT TERRESTRIAL BROADBAND REMOTE COVERAGE] continued in WP 5D 40th meeting in February 2022. The working document was elevated to Preliminary Draft New Report status in the WP 5D 40th meeting in February 2022 and the current working document is included in Chapter 5 Annex 5.6 to the Chairman’s report (Chapter 5 [Annex 5.6](#)/ Document [5D/1078](#)).

2. Proposal

The PDNR “Terrestrial IMT for remote sparsely populated areas providing high data rate coverage” may be considered for elevation to Draft New Report in the current WP 5D 41st meeting in June 2022.
